DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1-12 and 27-43 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In each of the independent claims, the "ion region" is not clear. Examiner assumed previously that this would be simply a doped region formed by ion implanting as set forth in the claims, but the designation of "ion region" seems amenable to other interpretations as well. Examiner understands the ion implant process to mean that a beam of ionized atoms is used to implant those atoms into the device region. So the designation "ion" could refer to the source of the atoms (the ion beam). But, once implanted (and activated), the atoms form bonds, and are no longer, strictly speaking, ionized atoms. However, the electrical process by which dopant modifies conductivity can also be considered ionization, because the atom can donate a mobile charge to the conduction, and retains a form of fixed charge within the lattice. But a dopant atom need not be ionized in this sense in order to function as dopant (the doped region need not be fully ionized). So, does the designation "ion region" mean simply that the dopant atoms originated as part of an ion beam, or does this mean that the dopant atoms must be electrically ionized within the lattice (either fully or perhaps only partially)?

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Crane, whose telephone number is (571) 272-1652.
